Telephone Message Report

1. On Tuesday, 25 September 1956 during a telephone conversation with Mr. Al Draper, Headquarters Strategic Air Command, US Air Force, Omaha, Nebraska it was determined that the SAC URC-11/ARA-25 evaluation program had been delayed due to the fact that the URC-11's received by SAC were defective. Mr. Draper stated that the combination microphone speaker in these units was not capable of sufficient modulation to provide effective operation and that attempts to procure additional microphones had been unsuccessful.
2. Mr. Draper stated that SAC had finally been successful in procuring additional URC-11 units on the standard emergency frequency and were cannibalizing these units in order to repair their test frequency models. Mr. Draper stated that he hoped the evaluation would soon be ready to commence.
